User guide – Getting started

Log in

This is the first view that you will see. It's just the log in page. You can register by clicking the “Register” button.

REGISTRARSE

Registration

The registration page will ask for your phone number, email, username and password. We recommend you to register with Wi-Fi network because it could take some time and data.

Home page

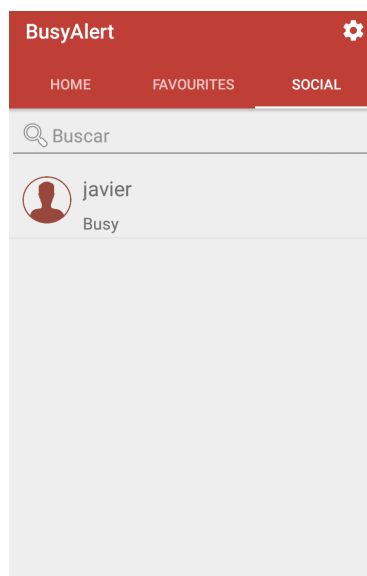

Once logged in, you will see the home page. It gives you different options:

1. You can start monitoring your activity (so the GPS needs to be enabled). When the application detects a driving activity, it will automatically notify to your entire favourite users list.
2. You can also enable the notifications option. If this option is enabled, you can receive friend's notifications.
3. (Premium accounts) If you are a premium user, you will be able to send premium notifications. These notifications are customized.

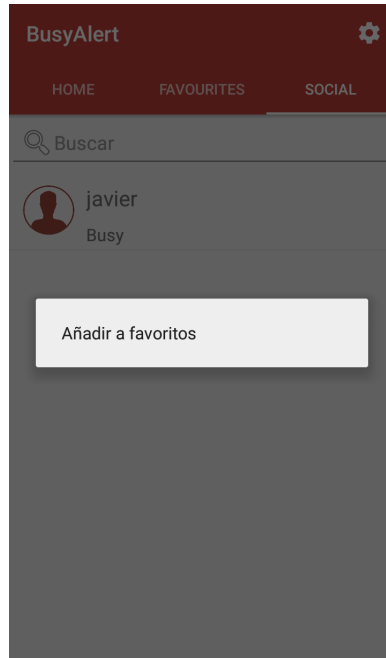

Social view

This view is a list of all your phone contacts that have the application.

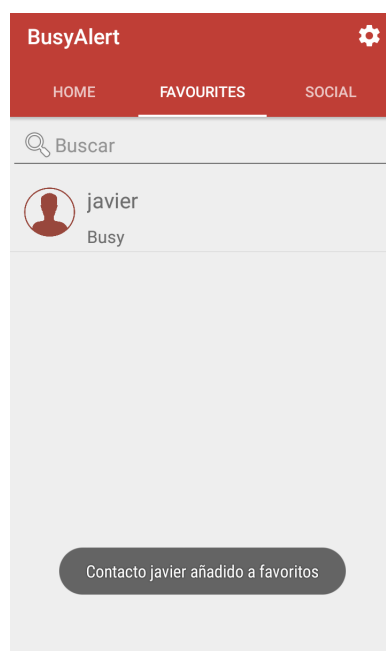

Adding users to favourite list

In the social view, if you click in a user, a context menu will be displayed. It will give you the option to add the contact to your favourite list.

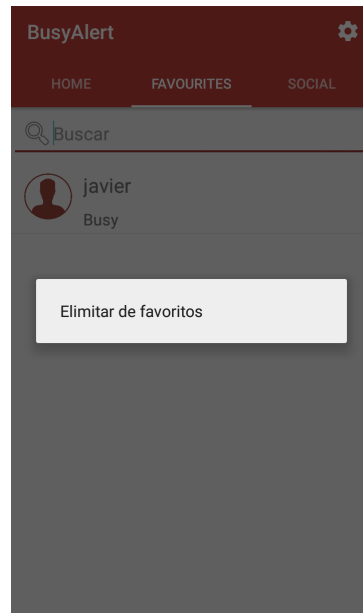

Favourite view

In this list only appear your favourite friends. These are the users that will be notified when you are busy!

Deleting favourite user

You can also delete an user from your favourite list by clicking inside the name.

Settings

In the settings page you can customize your profile (as your user name or your status), log out, update your contact list and enable the bike and run monitoring. If these options are enabled, the application will also notify your favourite friends when you are running or driving a bike.

You can also decide the network usage (any or Wi-Fi only).
